Paper 3 A Level Structured Questions

**March 2018**

MARK SCHEME

Maximum Mark: 150

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the March 2018 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

**PUBLISHED****Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(c)	Realisation concept <b>(1)</b> Prudence concept <b>(1)</b>	<b>2</b>
1(d)(i)	It is important that Marco creates a provision for unrealised profit because:  IAS2 states that inventory is valued at the lower of cost and net realisable value, so unrealised profit should be removed from the inventory valuation otherwise profits <b>(1)</b> and current assets <b>(1)</b> will be overvalued. Realisation concept states that revenue should only be recorded in the business books of account when the goods have been sold for credit or cash <b>(1)</b> and prudence concept states that losses should be provided for as soon as they are anticipated but profits are not recorded until realised <b>(1)</b>	<b>4</b>
1(d)(ii)	Profit will be greater by \$30 000 <b>(1)</b> if there is no provision for unrealised profit. However this profit is overstated <b>(1)</b> as the inventories have not been adjusted for unrealised profit. <b>(1)</b> Any decision based on these levels of profit would be based on expectations of a higher profit which may not be achieved <b>(1)</b>	<b>4</b>

Question	Answer	Marks
5(d)	With the casting department Hyung Min has an adverse efficiency variance of \$57 000. This means the workforce employed were not as efficient and spent more time than expected to produce the 28 500 vases. <b>(1)</b> this may be because they were not as skilled as expected <b>(1)</b> or the machinery kept breaking down <b>(1)</b> or there were other faults in the production line. Finally it could be because the quality of the material was less than expected and so took longer to use <b>(1)</b> <b>max 3</b> In both the polishing and finishing departments there are adverse rate variances which means that Hyung Min paid out more money per hour than he expected to do. This may be because he employed employees with more skills in these departments. <b>(1)</b> Alternatively there may be a scarcity of labour in the area so more has to be paid to attract the workforce <b>(1)</b> <b>Overall max 4 (1)</b>	<b>4</b>
5(e)	Overall total labour variance was favourable <b>(1)</b> by \$1500 <b>(1)</b> . Therefore it is not a cause of concern <b>(1)</b> . However, rate variance in finishing and efficiency in casting are quite high. Therefore take some action to reduce these <b>(1)</b> .	<b>4</b>

Question	Answer	Marks																																													
6(a)	Net present value uses discounted rates to calculate the present value of future money <b>(1)</b> whereas the payback method does not. <b>(1)</b> The net present value method considers all <b>(1)</b> the cash flows of a capital investment whereas the payback method just considers those cash flows up to the date of payback. <b>(1)</b>	<b>4</b>																																													
6(b)(i)	Payback is 3 years <b>(1)</b> and 2 months <b>(1)</b>	<b>2</b>
