**MATHEMATICS**

**9709/21**

Paper 2 Pure Mathematics 2 (P2)

**May/June 2018**

**1 hour 15 minutes**

Candidates answer on the Question Paper.

Additional Materials: List of Formulae (MF9)

**READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

**DO NOT WRITE IN ANY BARCODES.**

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The total number of marks for this paper is 50.

This document consists of **14** printed pages and **2** blank pages.

**BLANK PAGE**

1 Solve the equation  $3e^{2x} - 82e^x + 27 = 0$ , giving your answers in the form  $k \ln 3$ . [5]

2

The variables  $x$  and  $y$  satisfy the equation  $y = A \times B^{\ln x}$ , where  $A$  and  $B$  are constants. The graph of  $\ln y$  against  $\ln x$  is a straight line passing through the points  $(2.2, 4.908)$  and  $(5.9, 11.008)$ , as shown in the diagram. Find the values of  $A$  and  $B$  correct to 2 significant figures. [5]

The diagram shows the curve with equation  $y = \frac{5 \ln x}{2x + 1}$ . The curve crosses the  $x$ -axis at the point  $P$  and has a maximum point  $M$ .

- (i) Find the gradient of the curve at the point  $P$ . [3]

.....

5 The parametric equations of a curve are

$$x = 2 \cos 2\theta + 3 \sin \theta, \quad y = 3 \cos \theta$$

for  $0 < \theta < \frac{1}{2}\pi$ .

(i) Find the gradient of the curve at the point for which  $\theta = 1$  radian. [4]

6 The cubic polynomial  $f(x)$  is defined by

$$f(x) = x^3 + ax^2 + 14x + a + 1,$$

where  $a$  is a constant. It is given that  $(x + 2)$  is a factor of  $f(x)$ .

- (i) Use the factor theorem to find the value of  $a$  and hence factorise  $f(x)$  completely. [5]
