

6 How to calculate PHASE DIFFERENCE in a stationary wave

09 February 2021 07:17

① All pts in the "Same Loop" are said to be moving IN-PHASE with a phase diff of 0°

② All pts in the "neighbouring Loop" are said to be moving OUT-OF-PHASE with each other with a phase diff of 180°

③ All pts in the "alternatē Loops" are IN-PHASE with a phase difference of 360°

A & (K, L or M)
out of phase
phase diff of 540°
