

PRACTICE QUESTIONS

Q1

If the position vector \mathbf{r} and Force \mathbf{F} lies in x - z plane. Then direction of torque is

- (A) Along y -axis
B) Along z -axis
C) Along x -axis
D) Along x - y plane

$$\vec{\tau} = \mathbf{r} \times \mathbf{F}$$

Q2

Which one is not correct for a vector $\vec{A} = \sqrt{2}\hat{i} + \sqrt{2}\hat{j}$

- (a) has direction $\theta = 45^\circ$ with x -axis X
(b) has magnitude 2 X
(c) has magnitude 2 and direction $\theta = 45^\circ$ with y -axis
(d) has magnitude -2

$$\tan^{-1}\left(\frac{y}{x}\right) = \tan^{-1}(1) = 45 = \theta$$

$$(\sqrt{2})^2 + (\sqrt{2})^2 = 4 \quad \sqrt{4} = |\vec{A}| = 2$$

Q3

The cross product of two vectors is zero when

(a) they are parallel vectors

(b) they are anti parallel vectors

(c) they are perpendicular vector

(d) both a and b are correct

$$\vec{A} \times \vec{B} = AB \sin \theta \hat{n}$$

$$\sin \theta = 0 \Rightarrow \vec{A} \times \vec{B} = 0$$

$$\theta = 0^\circ, 180^\circ$$

Parallel.

Q4

Which of the following can't rotate

(A)

Q5

A force F is applied to a beam at a distance " d " from pivot. The force at an angle θ to the beam.

Which combination will be cause the largest turning effect about the pivot.

	F	d	θ
A)	Large	Large	Large
B)	Large	Large	Small
C)	Small	Small	Large
D)	small	Large	Small

$$\vec{C} = r \times F = r F \cos \theta$$

θ is small.

Q6

The value of $\hat{i} \cdot (\hat{j} \times \hat{k})$

(a) 0

(c) +1

(b) 3

(d) -1

$$\hat{i} \cdot (\hat{i}) = \textcircled{1}$$

Q7

A man walks from A to C, C to D and D to B (as shown in figure). The magnitude of displacement of man is 10 m. The total distance travelled by the man is :

$\overline{CD} = 10\text{ m}$

~~$+1 + 10\text{ m}$~~
 $d = 10\text{ m}.$

- (a) 10m
- (c) 7m

- (b) 12m
- (d) 2m

Q8

For a body to be in equilibrium under the combined action of several forces:

- (a) all the forces must be applied at the same point \times
- (b) all of the forces form pairs of equal and opposite forces \times
- (c) any two of these forces must be balanced by a third force \times
- (d) the sum of the components of all the forces in any direction must equal zero \checkmark

$\sum F_x = 0 = \sum F_y$

Q9

Torque acting on a body determines

- (a) acceleration \times
- (b) linear acceleration \times
- (c) angular acceleration
- (d) direction of motion of the body

Q10

A force of 10N is acting along y-axis. Its component along x-axis is

- (a) zero \checkmark
- (b) 10N
- (c) 100N
- (d) 5N
